Set 7703 / Pair 7702  
Same body, longer tie bar

- Full-time pressurized oiling to feed the bearing
- Full-time pressurized oiling to feed the pushrod
- Flat face on pushrod oil port enhances oil flow to pushrod
- Pro series Tie Bar button
- REM finish
- Made in Cleveland, OH

---

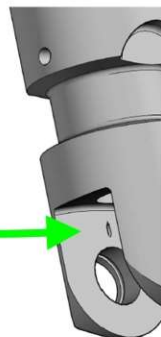

## Oil Flow Diagram

The milled notch allows oil flow on small base circle cams.

Oil enters this port to lubricate the Pushrod.

Full time pressurized oil enters the body and exits into the bearing to enhance durability.

The flat face allows oil to quickly enter the oil port of the lifter.
